WITH THE LAUNCH OF ITS NEW LIAISON HIV HT DIASORIN CONFIRMS ITS COMMITMENT AND STRATEGY IN THE BLOOD BANKS MARKET

October 7, 2014 - Saluggia (VC) - DiaSorin (FTSE Mid Cap:DIA) today strengthens its presence in the Blood Banks market through the launch of the new test LIAISON XL murex HIV Ab/Ag High Throughput (HT) outside the USA and Canada.

The strategy of DiaSorin in Blood Banks has developed through the acquisition from Abbott in 2010 of MUREX, the leading brand of Blood Banks, and through the development and marketing of the complete menu for Blood Banks on the platform LIAISON XL.

DiaSorin today offers the most extensive menu of technology combined CLIA and ELISA in the market.

This strategy has allowed DiaSorin to penetrate important markets such as Latin America, Asia-Pacific and Europe, which have a total estimated value, with regard to the Immunodiagnostic, of approximately 400 million Euro.

For example DiaSorin holds a significant market share in Brazil, Mexico, Malaysia, Taiwan and observes a continuous growth in key European countries.

In recent weeks, DiaSorin has won an important tender with the Red Crescent in Turkey, an organization that represents almost all of the donations in the country and expects 29 million tests over the next 3 years. This success confirms the appreciation for DiaSorin’s solutions by Blood Banks.

The launch of the new test LIAISON XL murex HIV Ab / Ag high-throughput (HT) enhances the offer and competitiveness of DiaSorin for the Blood Banks of medium and large size.
In fact, the test is able to offer a **high operating efficiency**, arriving at an hourly productivity of **171 tests on LIAISON XL**, and at the same time to remain one of the most sensitive tests available on the market today with a good level of specificity.

The ability to perform tests **with high productivity** and **diagnostic accuracy** is of fundamental importance for **Blood Banks**, which have to perform a defined protocol of tests to ascertain the presence of HIV, Hepatitis B and C, while respecting the response time.

It is also estimated that worldwide **35 million people are currently infected with HIV**, a virus that is transmitted through sexual contact between HIV-positive individuals, with exposure to contaminated blood, with the prenatal infection of a fetus or with the perinatal infection of a newborn from an infected mother. HIV continues to cause every year **2.1 million new infections and 1.5 million deaths**, representing, along with hepatitis, a real health emergency in some areas of the planet.
Carlo Rosa, CEO of DiaSorin, commented: “With the launch of HIV HT DiaSorin confirms the strategy of strengthening its role as major player in the market of Blood Banks, earning the role of a potential partner in the laboratories at high volumes.”

About DiaSorin
Headquartered in Italy and listed in the FTSE Italia Mid Cap Index, DiaSorin is a global leader in the In Vitro Diagnostics (IVD) field. For over 40 years the Company has been developing, producing and marketing reagent kits for IVD worldwide.
